In physics, engineering, and applied mathematics, Welch's method, named after P.D. Welch, is used for estimating the power of a signal at different frequencies: that is, it is an approach to spectral density estimation.

$\int_c^{\infty} f(y)dy = 1/c$ , where the last equality follows since  $f$  is a density function (hence by definition integrates to 1). Thus  $E(N) = c$ , the bounding constant, and we can now indeed see that it is desirable

Relative density, or specific gravity, is the ratio of the density (mass of a unit volume) of a substance to the density of a given reference material. Specific gravity usually means relative density with respect to water.
