This flow cytometry guide aims to give you a basic overview of all the important facets of flow cytometry without delving too deeply into the complex mathematics and physics behind it all.

Introduction to Flow Cytometry Basics Guide | Bio-Rad

BD Biosciences provides flow cytometers, reagents, tools, and a wide range of services to support the work of researchers and clinicians who understand disease and improve care.

Flow cytometry is an invaluable technology used in a wide variety of biological research. We have updated our popular flow cytometry guide which still contains a basic overview of all the important facets of flow cytometry without delving too deeply into the complex mathematics and physics.

An Introduction to Flow Cytometry - Bio-Rad Antibodies

In biotechnology, flow cytometry is a laser- or impedance-based, biophysical technology employed in cell counting, cell sorting, biomarker detection and protein engineering, by suspending cells in a stream of fluid and passing them through an electronic detection apparatus. A flow cytometer allows simultaneous multiparametric analysis of the physical and chemical characteristics of up to ...

Analysis and Isolation of Adipocytes by Flow Cytometry

Abstract. Flow cytometry is a sophisticated instrument measuring multiple physical characteristics of a single cell such as size and granularity simultaneously as the cell flows in suspension through a measuring device.

In organic chemistry, the phenyl group or phenyl ring is a cyclic group of atoms with the formula C_6H_5 . Phenyl groups are closely related to benzene and can be viewed as a benzene ring, minus a hydrogen, which may be replaced by some other element or compound to serve as a functional group. Phenyl groups have six carbon atoms bonded together in a hexagonal planar ring, five of which are ...

DCFDA - Cellular Reactive Oxygen Species Detection Assay Kit (ab113851) uses the cell permeant reagent 2,2'-dichlorofluorescein diacetate (DCFDA, also known as H2DCFDA), a fluorogenic dye that measures hydroxyl, peroxy and other reactive oxygen species (ROS) activity within the cell.

Trophoblast cells are specialized cells in the placenta that mediate the interactions between the fetus and mother. Okae et al. report the derivation of human trophoblast stem cells from blastocysts and early placentas, which will provide a powerful tool to study human placental development and function.
