Information technology can improve patient safety by preventing errors and facilitating rapid response to adverse events. Computerized prescribing by physicians reduces the rate of medication-related errors. Systems that automatically page clinicians about serious laboratory abnormalities and remote monitoring of patients in intensive care units also appear promising.

## **Improving Safety with Information Technology | NEJM**

Point-of-care testing (POCT), or bedside testing is defined as medical diagnostic testing at or near the point of care—that is, at the time and place of patient care. This contrasts with the historical pattern in which testing was wholly or mostly confined to the medical laboratory, which entailed sending off specimens away from the point of care and then waiting hours or days to learn the ...
